

Backed by Sunburst

The Polywood shutter is guaranteed for life against any defects in workmanship, color or installation. The motor, shutter mechanism, and remote control all come with 5-year warranties. Please note that manual operation of a remote controlled shutter could damage the motor or mechanism, and will void the warranty.

Battery life varies greatly by use. Battery replacement is easy and will be demonstrated by your installation team. In the rare case that you need to reprogram your remote control, you can contact your Sunburst store for assistance.

Sunburst Shutters has locations across the country. To find one near you, visit us at:

First. Because they last.™

877-SUNBURST (877-786-2877)

Welcome to total freedom.

With Sunburst's new Polywood[®] Shutter with Remote Control, you can now control light, temperature, noise, and privacy at the touch of a button.

Telis Remote – Actual Size

Simplify your life.

Polywood Shutters with Remote Control are designed for your total comfort and convenience. A great addition to any home, you can use them to manage glare, control light, increase privacy, and save energy. They're especially useful in rooms with out-of-reach windows, and they're a perfect fit for home theaters and large rooms with multiple windows – allowing you to adjust every window in the room without leaving your seat.

Polywood Shutters with Remote Control are essential for the elderly, and people with disabilities, empowering them to adjust their environment effortlessly.

Smooth Operation

Built into the best quality shutter in America, Polywood Shutters with Remote Control feature a motor in the base of each shutter which operates all louvers in unison. The system works on radio frequency technology, so the remote doesn't have to be pointed at the shutter to work. It can even open or close the louvers from the next room.

A variety of remotes are available, and your Sunburst representative can help you select the right one for your home. Choose a 1-channel remote for shutters in one or two rooms, or a 5-channel remote for shutters in the entire house. The 5-channel remote can be set to control individual panels, windows, rooms, or even an entire section of the home on each channel.

Sunburst also offers a wireless wall switch. It looks like a decorative light switch, yet runs on batteries – so there's no wiring involved. And our professional installation team will program the remote system for you and show you just how easy it is to use.

It's great to be in control.

You deserve true comfort at home. Enjoy the freedom of changing your environment at the touch of a button. Sunburst's Polywood® Shutter with Remote Control puts that power at your fingertips. One touch of the remote moves the louvers smoothly and quietly up or down, and you can stop anywhere along the way to set the louvers at any angle you want. Life just got a whole lot easier!
